

CSC 440 - DATABASE MANAGEMENT CONCEPTS & SYSTEMS

FALL 2018 PROJECT 1 - DATABASE APPLICATION DESIGN & IMPLEMENTATION

CARS - CAR Repair and Service management system Application Flow

This document is just to give you a general idea of the application flow. Please make sure you refer to the description and handle all the requirements/constraints mentioned therein. Since there is no overlap between customer, receptionist, manager, the application will provide a single login screen and redirect the user to the appropriate home page. There are three different types of home pages depending on the type of user:

1) Manager 2) Receptionist 3) Customer

Please make sure you verify the login credentials before logging in.

Role-based Access Control

Customer

The account for customers shall be created from the application. When logged in as a customer, the homepage displays the following options:

- View and Update Profile: This will have the following sub-menus
 - View Profile: The logged in customer should be able to view his profile information.
 - Update Profile: The logged in customer should be able to update his profile information.
- Register Car: A customer should be able to register a car with a service center. He should be allowed to only register cars that belong to an approved maker list (Honda, Nissan, and Toyota)
- View and Schedule Service: This will have the following sub-menus:
 - View Service History: A customer should be able to see service history for his car using the car's license plate number.
 - Schedule Service: A customer should be able to schedule a new maintenance/repair service appointment for his car using the car's license plate number. This will have the following sub-menus:
 - Schedule Maintenance
 - Schedule Repair
 - Reschedule Service: A customer should be able to reschedule a service appointment for his car using the car's license plate number.
- View Invoices: A customer should be able to view invoices billed to him.

Receptionist

The account for receptionist can be created only by the manager. When logged in as a receptionist, the homepage displays the following options:

- View and Update Profile: This will have the following sub-menus
 - View Profile: After logging in a receptionist should be able to view his profile information.
 - Update Profile: After logging in a receptionist should be able to update his profile information.
- View Customer Profile: A receptionist should be able to view a customer's profile information.
- Register Car: A receptionist should be able to register a customer's car for service. He should be allowed to only register cars that belong to an approved maker list (Honda, Nissan, and Toyota).
- View Service History: A receptionist should be able to see service history for all cars a customer gets serviced at the current service center.
- Schedule Service: A receptionist should be able to schedule a new maintenance/repair service appointment for a customer car using the car's license plate number. This will have the following sub-menus:
 - Schedule Maintenance
 - Schedule Repair
- Reschedule Service: A receptionist should be able to reschedule a service appointment for a customer using the car's license plate number.
- View Invoices: A receptionist should be able to view invoices billed to a particular customer.
- Daily Task - Update Inventory: A receptionist should be able to run a daily task to update the counts of parts to be used that day, basically adjusted (decrementing them) to reflect the fact the parts will be removed and actually used that day.
- Daily Task - Record Delivered Orders: A receptionist should be able to run a daily task to update the status of any pending orders whose items have arrived to "complete" and update their counts. For any pending orders that have not arrived and are past the delivery window change their status to "delayed" and generate a notification for the manager.

Manager

The account for manager shall be created using SQL Scripts and not from the application. When logged in as an manager, the homepage displays the following options:

- View and Update Profile: This will have the following sub-menus
 - View Profile: After logging in a manager should be able to view his profile information.

- Update Profile: After logging in a manager should be able to update his profile information.
- View Customer Profile: A manager should be able to view a customer's profile information.
- Add New Employee: A manager should be able to add new receptionists and mechanics at the service center he manages.
- View Payroll Information: A manager should be able to view the payroll information for all employees at the service center he manages.
- View Inventory: A manager should be able to view the inventory for the service center he manages.
- View and Place Orders: This will have the following sub-menus:
 - View Order History: A manager should be able to see order history for any orders involving his service center.
 - Place Orders: A manager should be able to place orders for any part in the inventory. He should also be able to add new parts to the inventory at his location via this menu option. Whenever an order is placed this using this option, it will be assumed that the part will be supplied by the authorized distributor only.
- View Notifications: A manager should be able to view all notifications generated at this service center.
- Register New Car: A manager should be able to register a new car model from the approved makers (Honda, Nissan, and Toyota) into the system and assign service details for the new model.
- View Service Details: A manager should be able to see service details (service schedule, parts required etc.) for all car models.
- View Service History: A manager should be able to see service history for any car serviced at his service center.
- View Invoices: A manager should be able to view all invoices billed to any customer at his service center.

Application Menu

Below is the application menu for the CARS system. We expect you to follow this program flow strictly. You must validate all user input and display appropriate error messages whenever necessary prompting the user to re-enter his input, even if it may not be explicitly stated.

Start Pages

Home

Display Menu Input Output

Display the menu 1. Login

2. Sign Up 3. Exit

Enter Choice (1-3) Go to the appropriate page.

If exit is chosen, terminate the program.

Login

Display Menu Input Output

Ask user to input the following details in the order shown below, followed by the menu.

A. User ID B. Password

1. Sign-In 2. Go Back

Enter Choice (1-2) If the user chooses 1,

validate credentials and recognize if user is a Manager, Receptionist, or Customer to go to the correct Landing page. Print "Login Incorrect" for invalid credentials and ask to enter again.

If the user chooses 2, go back to the Home page

Sign Up

Display Menu Input Output

Ask user to input the following details in the order shown below, followed by the menu.

A. Email Address B. Password C. Name D. Address E. Phone Number

1. [Sign Up](#) 2. [Go Back](#)

Take input from user about the new customer.

After entering details A-E, choose option 1-2 from the menu

If the user chooses 1, save his entered information into database creating an account for this customer and go to Login page after displaying an appropriate message.

If the user chooses 2, go back to the Home page

Customer pages
